

From the  
man with  
the  
suspiciously  
rugged  
last  
name.

THE LEATHERMAN MULTITOOL WAS INVENTED BY  
TIM LEATHERMAN IN 1983

Despite his nerdy tendencies to sit in a lab for eight hours a day searching for ways to improve the perfect multitool, Tim Leatherman is a bona-fide bad ass. For any option available on the Leatherman Series Multitool, Tim has an only slightly embellished story about where the idea for it came from. A bad experience with hotel plumbing in Tehran bore the locking pliers, while a burnt carburetor in Naples fostered the metal file. His trials and tribulations as an airplane mechanic in Phoenix resulted in the hex bit driver and wire stripper, as his trouble with long lines in Kachikan gave rise to the needle nose pliers. So yes, his name may sound suspiciously rugged, but it's as true as the 300-series stainless steel that makes each Leatherman so tough.
