

From the
man with
the
suspiciously
rugged
last
name.

Despite his mercurial tendencies to sit in a lab for eight hours a day searching for ways to improve the perfect multitool, Tim Leatherman is a bona-fide tool guy. For any option available on the Leatherman Series Multitool, Tim has an only slightly embellished story about where the idea for it came from. A tool experience with fuel plumbing in Telran bore the locking pliers, while a turn calculator in Naples fostered the metal file. His trials and tribulations as an airplane mechanic in Phoenix resulted in the hex bit driver and wire stripper, as his trouble with long lines in Kachikan gave rise to the needle nose pliers. So yes, his name may sound suspiciously rugged, but it's as true as the 300-series stainless steel that makes each Leatherman so tough.
